Profile

Enthusiastic and dedicated BCA graduate with strong expertise in Laravel and full-stack web development. Experienced in building dynamic, secure, and responsive web applications using PHP, Laravel, JavaScript, and MySQL. Committed to writing clean, maintainable code and delivering reliable backend logic. Quick learner with a problem-solving mindset, strong debugging skills, and the ability to collaborate effectively in team environments.

Projects

○ TechZone Laptops - E-commerce Website

Built a responsive e-commerce site for laptops with HTML, CSS, JavaScript, and MySQL.

Features include product catalog, user login, shopping cart, and admin order management.

Enhanced user engagement with a "New Launch" page and targeted ads.

○ V-Work - Project Management System

Built a Laravel-based web app with role-based access for admins and users.

- Secure authentication system with separate dashboards for Admin and User roles
- Project and task assignment by Admins to specific users
- Time tracking and logging for each task
- Live project/task status updates with real-time synchronization
- Real-time discussion/chat system with date-wise message grouping (e.g., "Today", "Yesterday")
- Seamless user collaboration through instant updates and notifications

○ VibeCart - E-commerce Website

Built a Flipkart-style e-commerce website with full user and admin functionality. Key features include product filtering (main/category/subcategory), add to cart & wishlist (with guest support), coupon-based checkout, OTP email verification, order tracking, and admin order management. Fully responsive and live at vibecart.free.nf. Payment gateway is excluded for now as it's a learning-focused project.

○ Laravel Product Enrichment System using ChatGPT API

Integrated OpenAI's ChatGPT API in a Laravel-based product management system to automate product data enrichment. Enabled AI-driven generation of product titles, descriptions, bullet points, and SEO metadata based on minimal input like product name or features. Implemented queue-based processing for bulk enrichment and token usage tracking. Also added multilingual support using DeepL API alongside ChatGPT for global catalog publishing.
